

**La Nouvelle Route du Littoral**  
**Metro stations Rennes**  
**DOHA Express Way**  
**Qatar Rail**  
**L2 in Marseille**  
**FFR stadium**  
**EOLE express train**

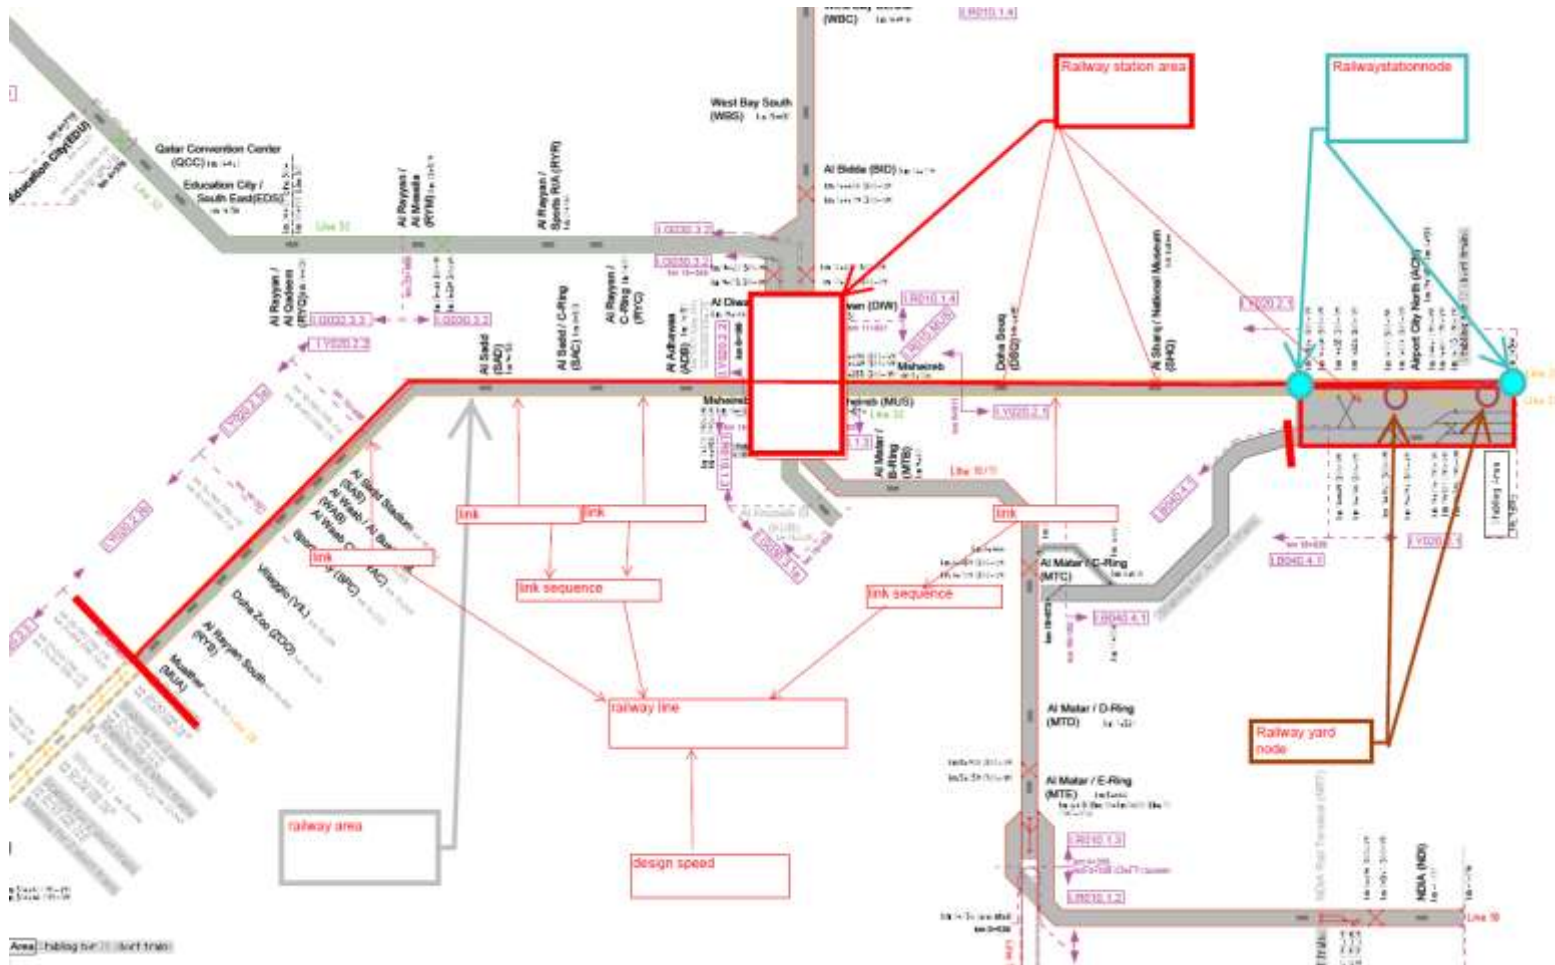

- Around **€15 billions** of works in progress
- Potential of IFC exchange based on existing:
  - NRL : 0%
  - L2 Marseille : 2%
  - Metro Station Rennes : 60%
  - Stade FFR : 60 %
  - Qatar Rail : 20 %
- But BIM is not only IFC

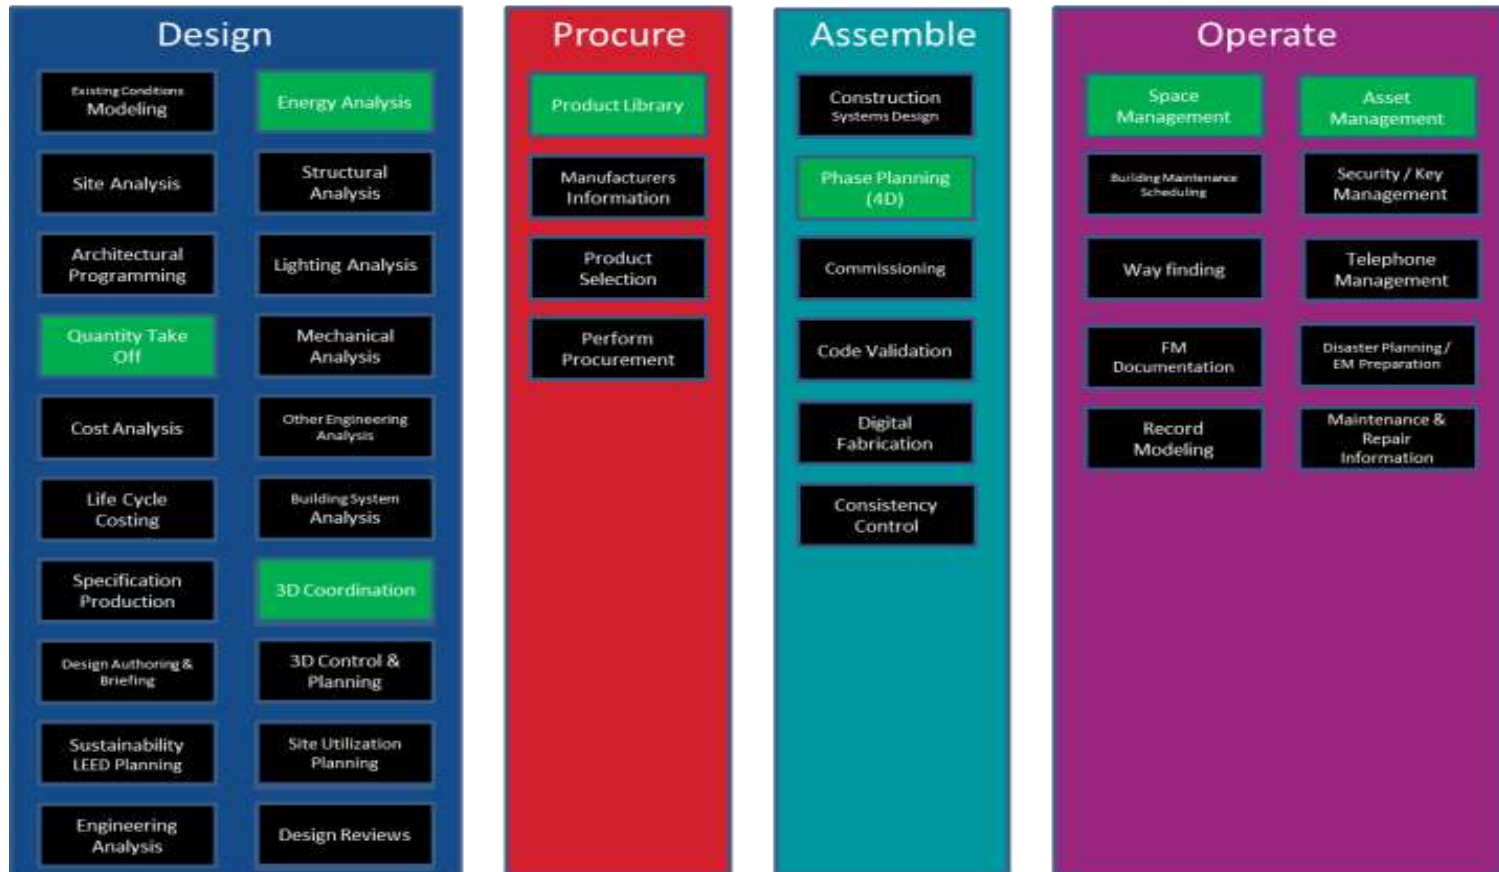

# Motorway description

# QATAR Rail description

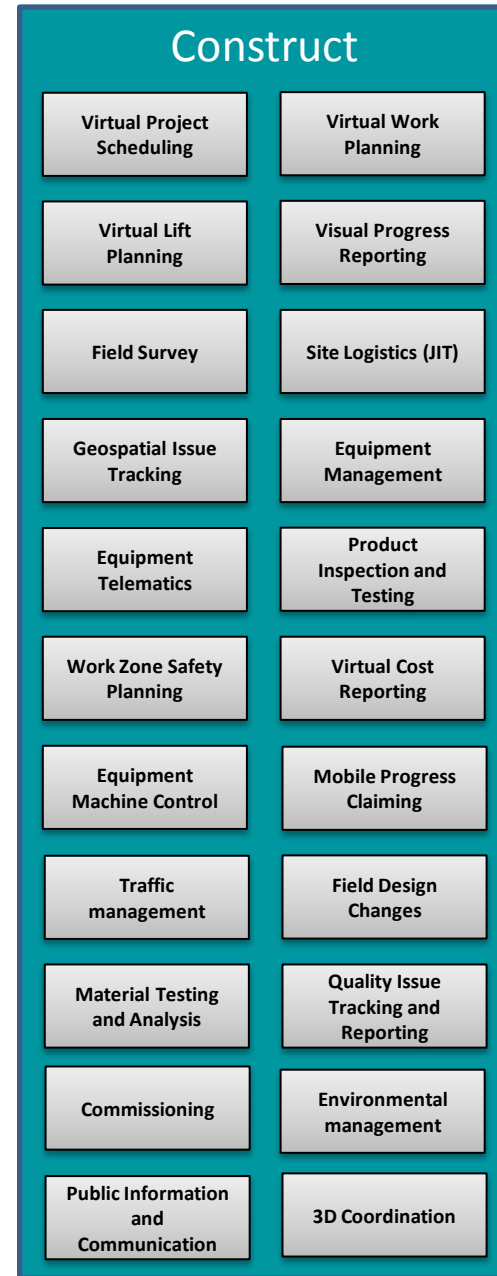

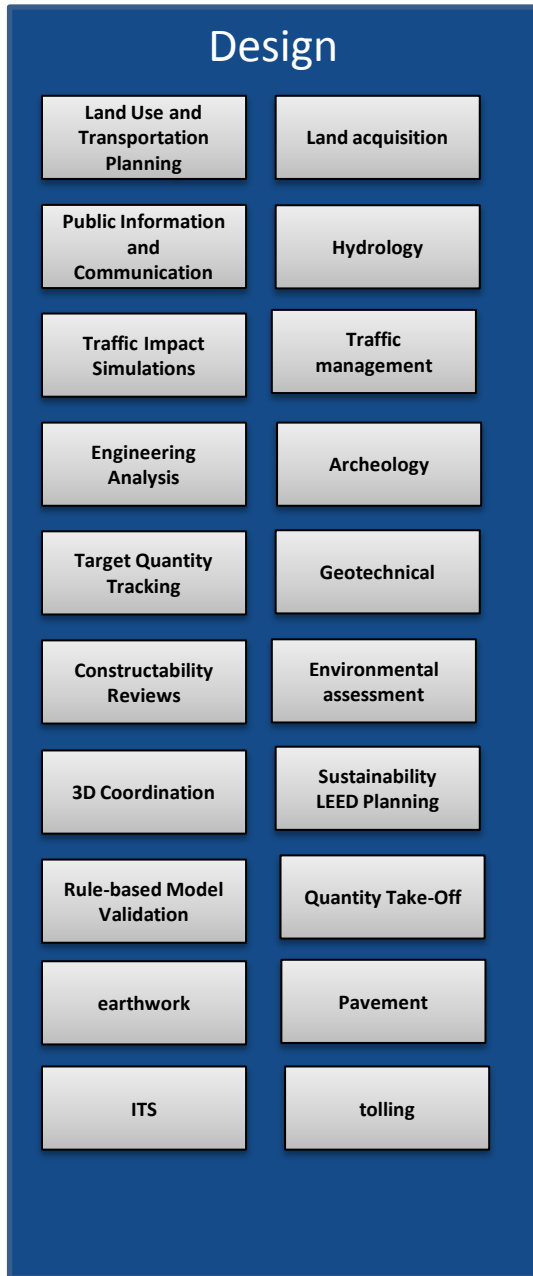

# Proposed Overall IFC structure of highway project

# Infrastructure engineering

## Design

Existing Conditions Modeling	Energy Analysis
Site Analysis	Structural Analysis
Architectural Programming	Lighting Analysis
Quantity Take Off	Mechanical Analysis
Cost Analysis	Other Engineering Analysis
Life Cycle Costing	Building System Analysis
Specification Production	3D Coordination
Design Authoring & Briefing	3D Control & Planning
Sustainability LEED Planning	Site Utilization Planning
Engineering Analysis	Design Reviews

## Procure

Product Library
Manufacturers Information
Product Selection
Perform Procurement

## Assemble

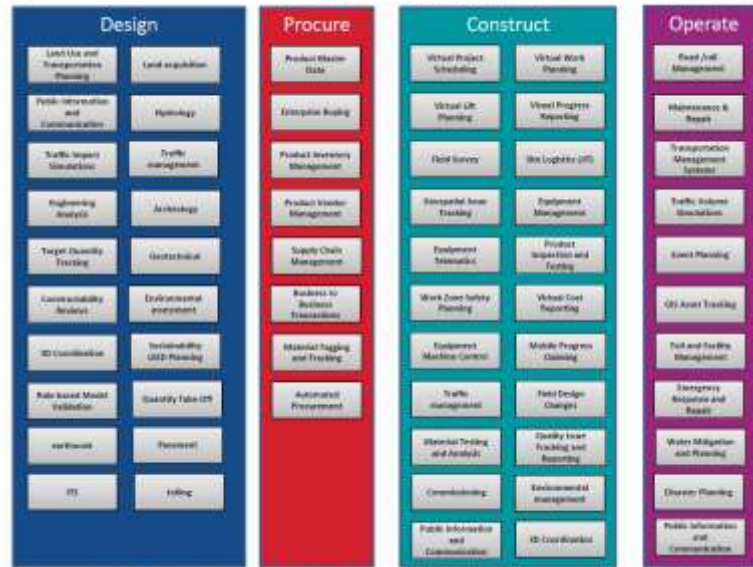

Construction Systems Design
Phase Planning (4D)
Commissioning
Code Validation
Digital Fabrication
Consistency Control

## Operate

Space Management	Asset Management
Building Maintenance Scheduling	Security / Key Management
Way finding	Telephone Management
FM Documentation	Disaster Planning / EM Preparation
Record Modeling	Maintenance & Repair Information

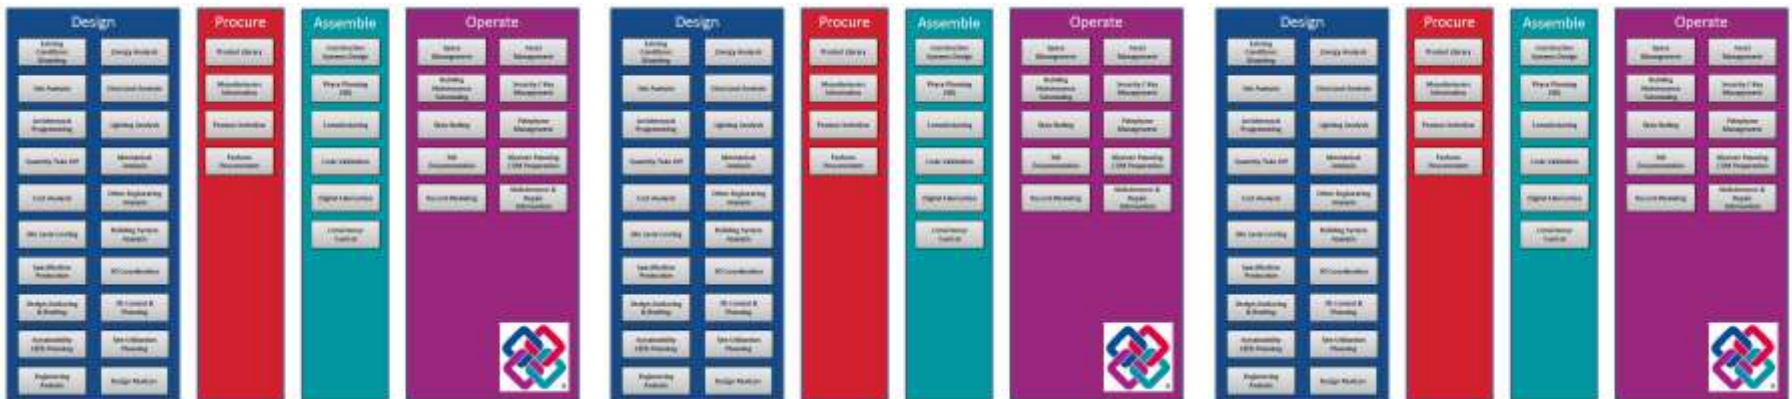

Infrastructure engineering

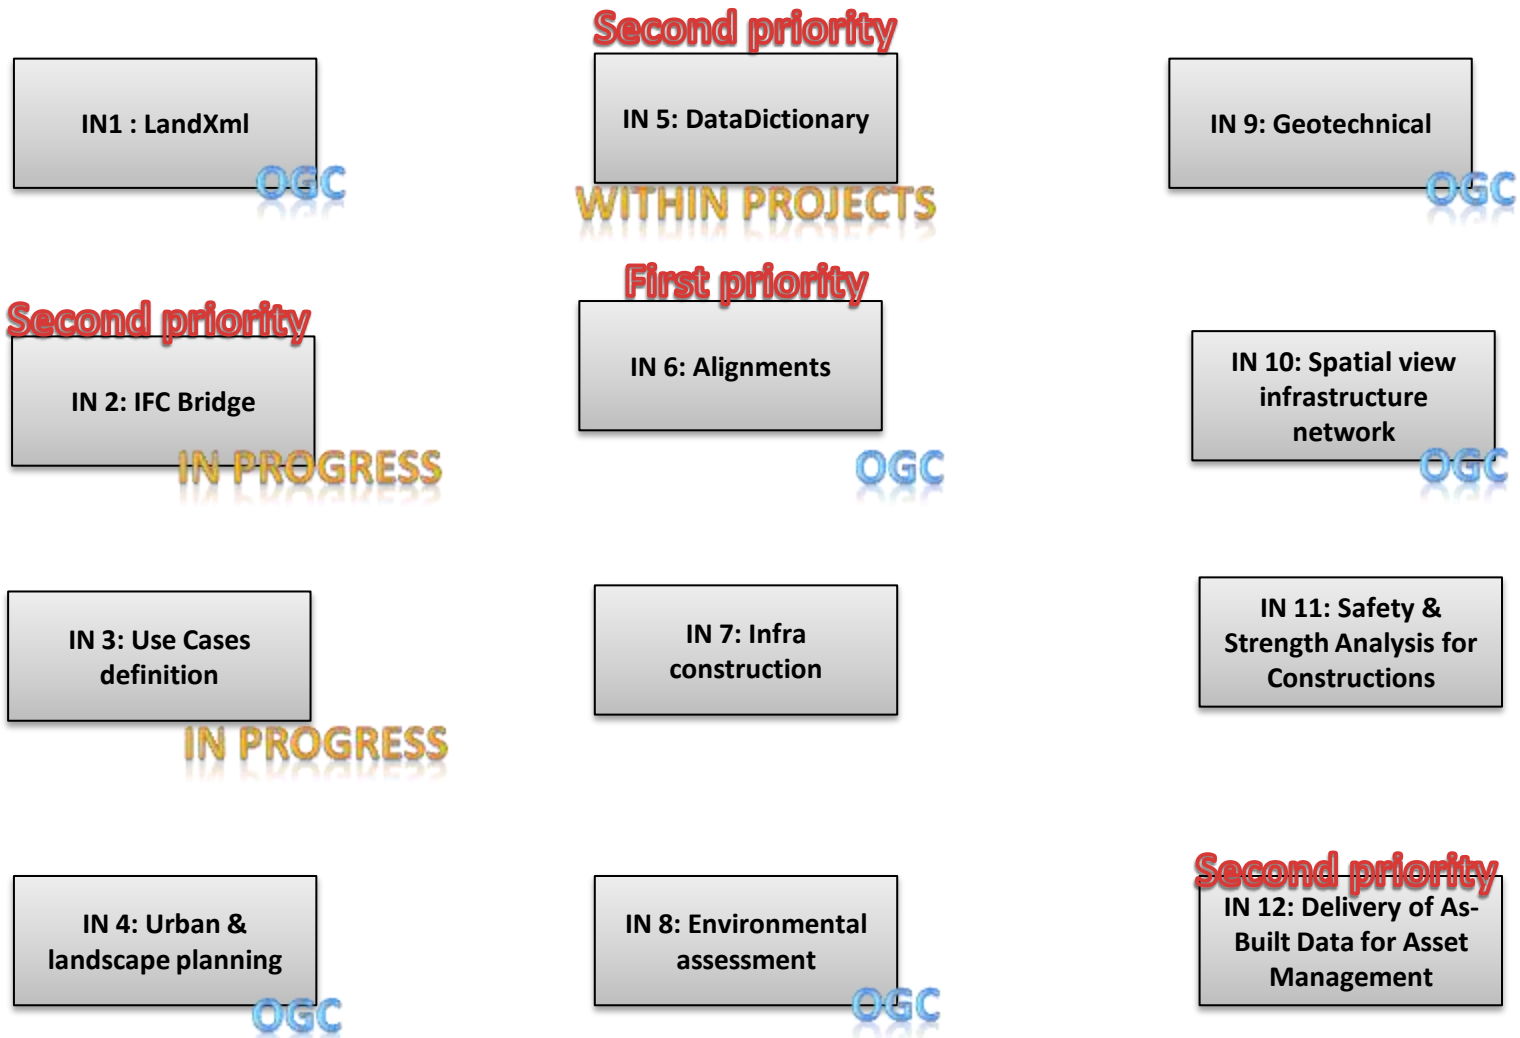

Road

Bridges/tunnel

Andre Borrmann

Infra Room 13/10-2	The Infra Room resolves to work on an overall strategy that gives direction for future work of the Infra room. It is expected to be discussed in the next Infraroom meeting (March 2014). The Steering Committee is asked to take action on this.
Infra Room 13/10-3	The Infra Room welcomes the proposal from Rijkswaterstaat to position COINS as an affiliated standard for buildingSMART and to bring this on the agenda of ITM
Infra Room 13/10-4	The Infra Room welcomes the initiative to forward a New Work Item to bring the Dutch COINS standard in a ISO standard and include PLCS developments. Encourage other chapters/countries to join this initiative
Infra Room 13/10-5	The Infra Room Resolves to express the need for extending the IFD standard to the level of interoperability and ask the product room to take action on this.
Infra Room 13/10-6	The Infra Room welcomes the MOU between buildingSMART, Rijkswaterstaat, V-Con and Trafikverket to work together to complete the Project IFC Alignment model.
Infra Room 13/10-7	The Infra Room resolves to give top priority to the Alignment project as expressed in the project summary of IFC Alignment and decides that alignment is needed in the next version of IFC. The first task of Infracom is to prepare a project management plan.
Infra Room 13/10-8	The Infra Room Concludes that coordination and collaboration with OGC and landXML is a crucial issue for the alignment project.
Infra Room 13/10-9	The Infra Room resolves that the other top priorities are: Data dictionary, IFC-bridge and Delivery of As-built data. Volunteers to work in activities on this priorities are identified. The steering committee will plan next steps. The development of use cases will be part of the activities.
Infra Room 13/10-10	The Infra Room welcomes the Korean IFC Road proposal to collaborate with the buildingSMART Infra room on the alignment project. Therefore Infrastructure room thankfully acknowledge the IFC Road proposal by KICT of Korean chapter and will recommend to Excom and ITM that it would be accepted after any necessary clarification.
Infra Room 13/10-11	The Infra Room recommends making the current LandXML MVD draft publically available for review and commenting via the buildingSMART website and encourages Infracom to organize a meeting with implementers

### 1.1.1 The Engineer's BIM Manager:

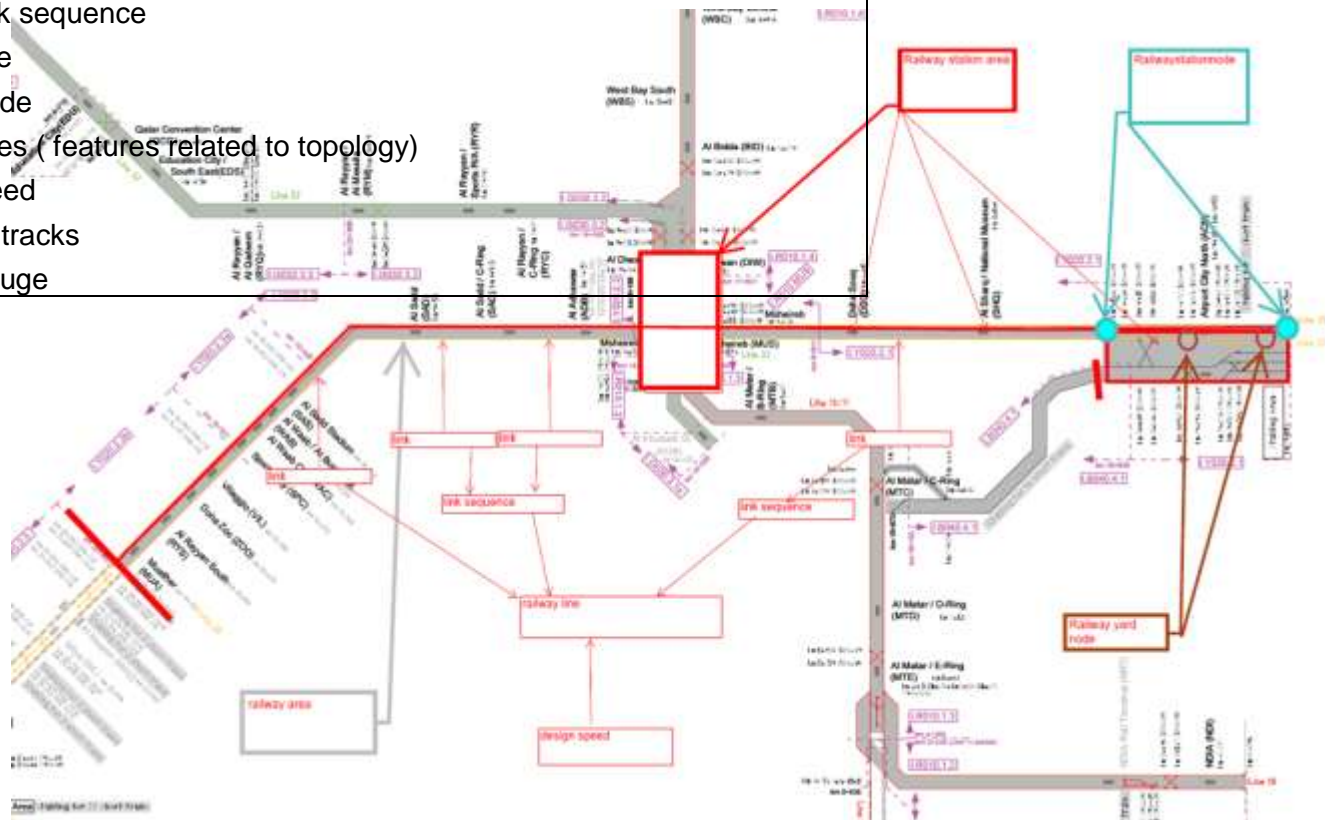

- a) Defines the Program BIM requirement;
- b) Ensures the BIM process serves the engineering and business requirement during the design and build phase of the Works;
- c) Ensures that data schema declared for the program serves the engineering requirements of the design and build phase of the Works;
- d) Ensures industry best practice is utilised for the BIM implementation and to facilitate the transition of design and as built data into operational data and information for Qatar Rail.

### 1.1.2 The Engineer's BIM Coordinator:

- a) Ensures the BIM process as declared by the Contractor is being effectively implemented and utilised by the Contractor;
- b) Verifies each BIM plan submitted by the Contractor meets the engineering requirement for the specific piece for work;
- c) Ensures the BIM process is delivering the engineering benefit declared by the Contractor for that stage in the design and build program.

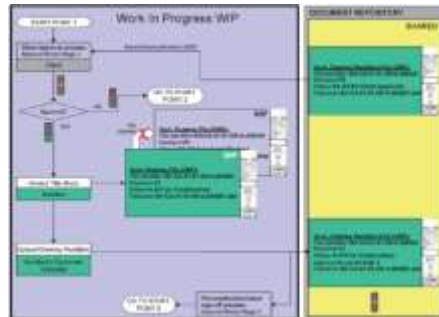

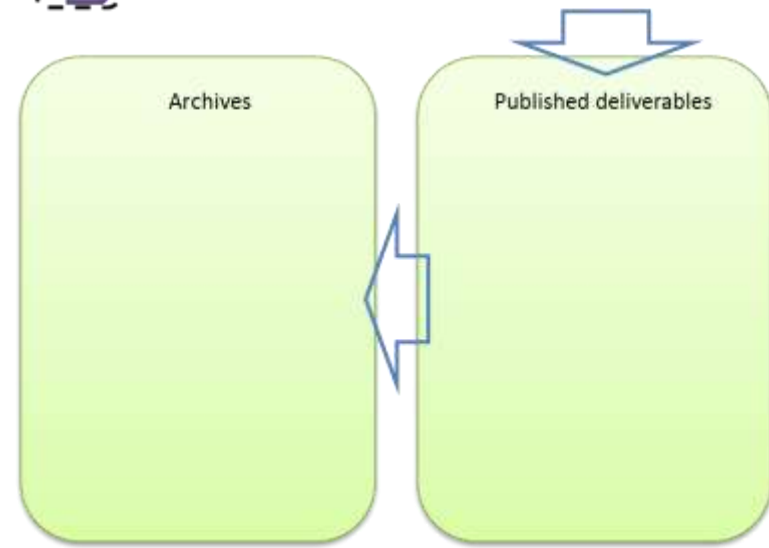

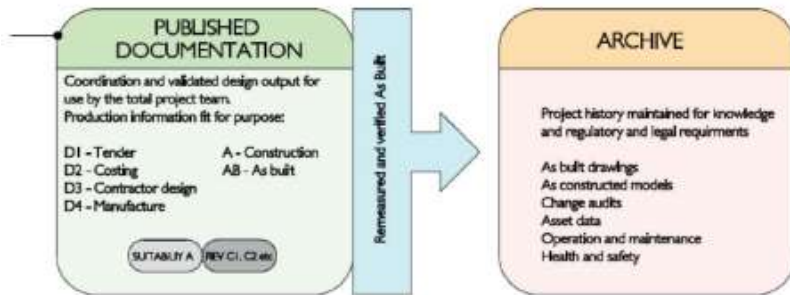

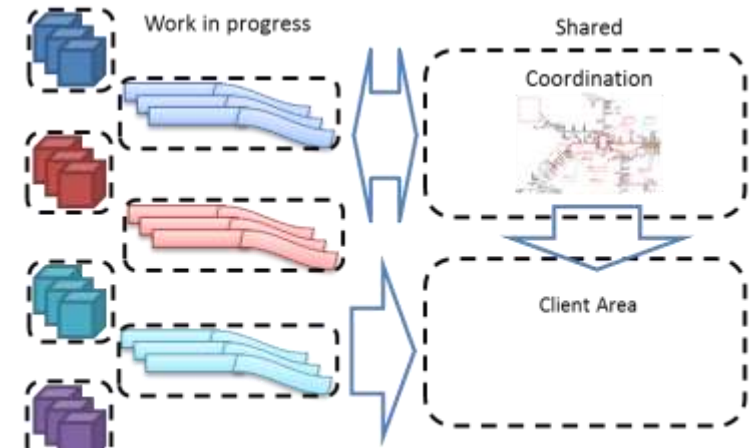

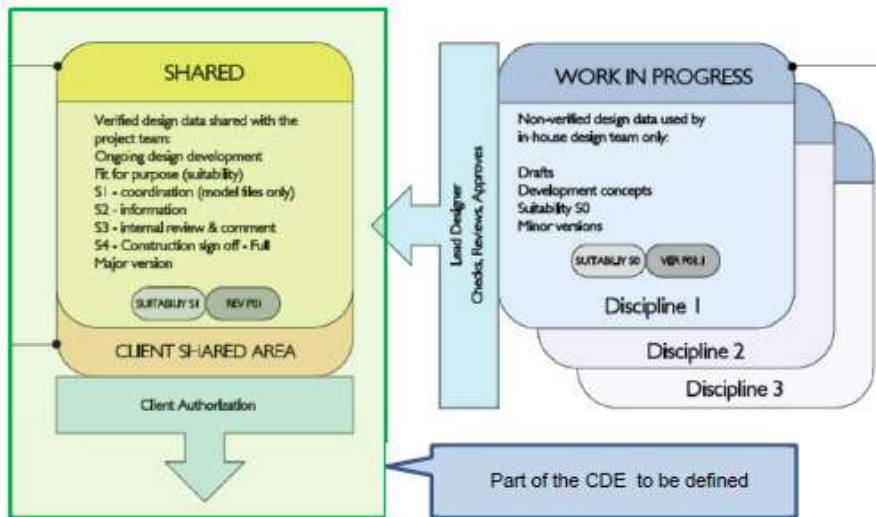

### Three classes

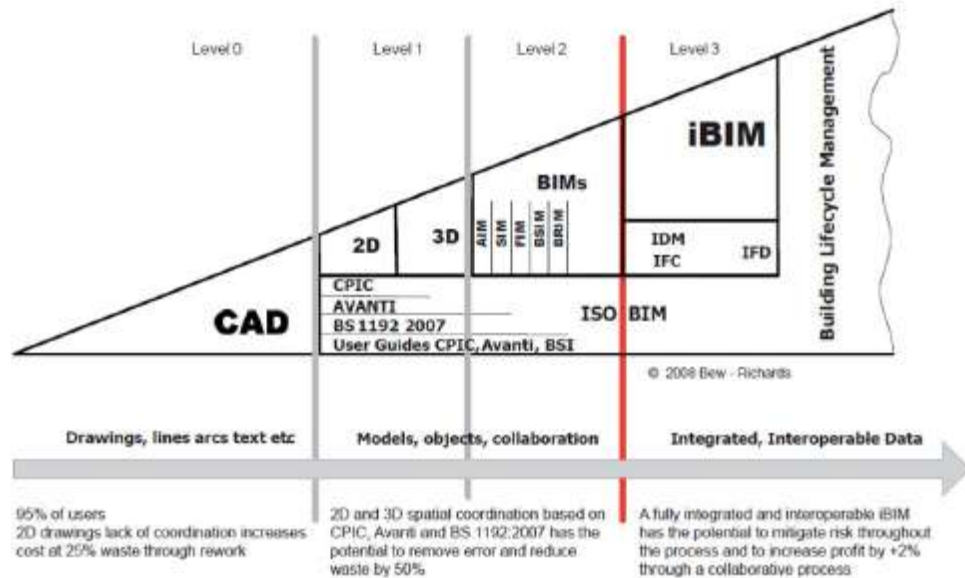

- Spatial area objects ( topographic area) – Zone ?
  - Railway station area
  - Railway area
  - Railway yard area
- Spatial objects ( topological)
  - Railway link
  - Railway link sequence
  - Railway line
  - Railway node
- Spatial objects features ( features related to topology)
  - Design speed
  - Number of tracks
  - Railway gauge

Owner	State/Date	DATA FEATURES AND SOFTWARE				WORKS TO BE MANAGED			ACTION UNDER MODEL		
domain N1		SOFTWARE	data	BIM level	geo spatial	detailed design	N3	interface	Analysis/Request in 3D		
Line (N2)					yes reference strategic	OBJECT N2					
Tunnel		3D pointcloud SD surfaces		level 1		Tube n°1 Tube n°2	Tube geometry (centerline/VA, CS) Track geometry Structure Tunnel Ventilation Cabinet dynamic Internal diameter External diameter Right of Way Reference zone Protection Zone Drainage System Fire load Concrete	Utilities (Kahramaa, Ote...) Asphal Road Program Existing Building (Car park, foundation) OSD program Fire connector Future surrounding Development System Contractor Safety Authorities	Structural Clear analysis		
BOX (station)		SD as surface		level 1		to develop from Revit model	Track geometry Cabinet dynamic Structure Tunnel Ventilation Cabinet dynamic Internal diameter External diameter Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	ground level equipment Fire Tunnel segment electromechanical&telecom equipment Safety equipment Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	Structural Clear analysis	Fire connector equipment analysis reference analysis	
Switch Box		SD as surface		level 1		to develop from Revit model	Track geometry Cabinet dynamic Structure Tunnel Ventilation Cabinet dynamic Internal diameter External diameter Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	ground level equipment Fire Tunnel segment electromechanical&telecom equipment Safety equipment Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	Structural Clear analysis	Fire connector equipment analysis reference analysis	
Emergency Exit		SD as surface		level 1		to develop from Revit model	Track geometry Cabinet dynamic Structure Tunnel Ventilation Cabinet dynamic Internal diameter External diameter Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	ground level equipment Fire Tunnel segment electromechanical&telecom equipment Safety equipment Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	Structural Clear analysis	Fire connector equipment analysis reference analysis	
TERRAIN MODEL		JANIMA	SD as surface			global modeling					
GEO TECH	not in the scope					system displaying					
Cross Passage		SD as surface		level 1		to develop from Revit model	Track geometry Cabinet dynamic Structure Tunnel Ventilation Cabinet dynamic Internal diameter External diameter Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	ground level equipment Fire Tunnel segment electromechanical&telecom equipment Safety equipment Utilities (Kahramaa, Ote...) Asphal Road Program Future surrounding Development Existing Building (Car park, foundation)	Structural Clear analysis	Fire connector equipment analysis reference analysis	
Ground level Equipment						SD objects	to be defined ries				
							System				Prévision intervention applicables aux émissifs Mise en évidence situations critiques due coexistence des objets
Architecture											
											System Contractor Civil Structure MSP Safety
lighting						21 objects ?	strip furling/branch cabinet poles				
											Architecture branding Civil Work System Contractor Safety
Hac ( civil works)						21 objects ?	concept ducting/branch cabinet poles				
											System contractor Station ventilation Structure interfaces (Block & shaft) Structure interfaces
Electrical & Mechanic						21 objects ?	strip ducting/branch cabinet poles				
											System Contractor Architecture Civil structure, Cable route Structure interfaces Safety equipment
UTILITIES						connection to existing ( water, power, telecom)					

Level 3 cannot be obtained in any case :

*Fully open process and data integration managed by a collaborative model server and could be regarded as iBIM or integrated BIM, potentially employing concurrent engineering processes.*

IDM/IFC is partially possible on some objects or works, like Station, in using Revit. No possibility with others tools used for the linear elements.  
Concurrent engineering processes are only partially possible.

A full level 1 can be obtained for the part of the project related to the link ( linear elements) including objects and collaborative tools (CDE)

A partial Level 2 can be obtained for the part of the project related to the stations

## The scope is:

- Common Data environment (CDE) to be defined
- BIM scope to be defined:
  - Processes covered by BIM (anticipated Bim scope)
  - BIM software involved in the processes
  - Relevant BIM levels
- Works Breakdown structure
  - Uniclass objects hierarchy
  - Digital data protocol ( data dictionary and data delivery)
- Project digital Protocol
  - Digital protocol table, based on the WBS and Uniclass hierarchy.
- BIM digital data exhibit
  - Digital data protocol
- Model management:
  - Modelling protocols ( authors, Lod, ...)
  - Model management protocol
- Program
- Process map
